# BTECH (SEM VI) THEORY EXAMINATION 2023-24 MACHINE DESIGN

TIME: 3 HRS M.MARKS: 100

Note: 1. Attempt all Sections. If require any missing data; then choose suitably.

2. Use of the Design Data handbook is allowed.

### **SECTION A**

1.	Attempt all questions in brief.	2 x 10 =	20
Q no.	Question	Marks	СО
a.	What are the advantages of cast iron form design considerations?	02	CO1
b.	Distinguish between design synthesis and design analysis.	02	CO1
c.	What is caulking? What is its objective?	02	CO2
d.	What is reinforcement in weld? What are its advantages and disadvantages?	02	CO2
e.	What are the advantages of cycloidal teeth gears?	02	CO3
f.	Define lead in worm gear.	02	CO3
g.	Define dynamic load capacity of the rolling bearing.	02	CO4
h.	What is significance of bearing characteristics numbers?	02	CO4
i.	Why is heat-dissipation necessary in clutches?	02	CO5
j.	What are the cooling systems for engine cylinders? Where do you use them?	02	<b>C</b> 05

#### SECTION B

2.	Attempt any three of the following:	3 x 10 =	= 30
a.	Consider a hypothetical need and discuss the procedure to design a machine to for this need.	10	CO1
b.	Discuss the different types of key and their applications.	10	CO2
c.	A pair of parallel helical gears consists of a 20 teeth pinion meshing with a 40 teeth gear. The helix angle is 25° and the normal pressure angle is 20°. The normal module is 3 mm. Calculate (i) the transverse module; (ii) the transverse pressure angle; (iii) the axial pitch; (iv) the pitch circle diameters of the pinion and the gear; (v) the centre distance; and (vi) the addendum and dedendum circle diameters of the pinion.	10	CO3
d.	Discuss the operating principle of hydrodynamic bearing along with McKee investigation.	10	CO4
e.	Discuss the design consideration for piston.	10	CO5

TIME: 3 HRS M.MARKS: 100

## **SECTION C**

3.	Attempt any <i>one</i> part of the following:	x 10 = 1	0	
a.	The frame of a hacksaw is shown in Figure. The initial tension P in the blade should be 300 N. The frame is made of plain carbon steel 30C8 with a tensile yield strength of 400 N/mm² and the factor of safety is 2.5. The cross-section of the frame is rectangular with a ratio of depth to width as 3. Determine the dimensions of the cross-section.	10		
b.	A cantilever spring made of 10 mm diameter wire is shown in Figure. The wire is made of stainless steel 4Cr18Ni10 (Sut = $860 \text{ N/mm}^2$ and $S_{yt}$ = $690 \text{ N/mm}^2$ ). The force P acting at the free end varies from 75 N to 150 N. The surface finish of the wire is equivalent to the machined surface. There is no stress concentration, and the expected reliability is 50%. Calculate the number of stress cycles likely to cause fatigue failure.	10	),	P

4. Attempt any *one* part of the following:  $1 \times 10 = 10$ 

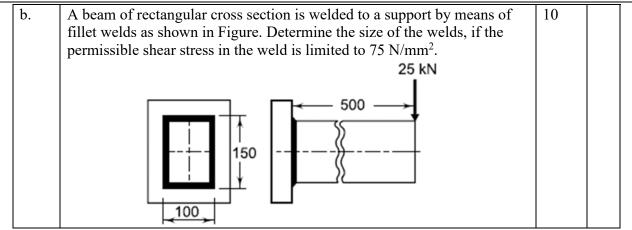

a.	A cylindrical pressure vessel with 1 m inner diameter is subjected to	10	
	internal steam pressure of 1.5 MPa. The permissible stresses for the		Ì
	cylinder plate and the rivets in tension, shear and compression are 80, 60		Ì
	and 120 N/mm <sup>2</sup> respectively. The efficiency of longitudinal joint can be		Ì
	taken as 80% for the purpose of calculating the plate thickness. The		Ì
	efficiency of circumferential lap joint should be at least 62%. Design the		Ì
	circumferential lap joint and calculate:		Ì
	(i) thickness of the plate;		Ì
	(ii) diameter of the rivets;		Ì
	(iii) number of rivets;		Ì
	(iv) pitch of rivets;		Ì
	(v) number of rows of rivets; and		Ì
	(vi) overlap of the plates.

TIME: 3 HRS M.MARKS: 100

<b>5.</b>	Attempt any <i>one</i> part of the following:	x 10 = 1	.0
a.	A pair of spur gears with 20° full-depth involute teeth consists of a 20 teeth	10	
	pinion meshing with a 41 teeth gear. The module is 3 mm while the face		
	width is 40 mm. The material for pinion as well as gear is steel with an		NU
	ultimate tensile strength of 600 N/mm <sup>2</sup> . The gears are heat treated to a	0-	
	surface hardness of 400 BHN. The pinion rotates at 1450 rpm and the		,
	service factor for the application is 1.75. Assume that velocity factor		
	accounts for the dynamic load and the factor of safety is 1.5. Determine the	<b>D</b> • .	
	rated power that the gears can transmit.		
b.	Discuss the application and materials for worm-worm gear assembly.	10	

6.	Attempt any <i>one</i> part of the following:	x 10 = 10
a.	Design a full hydrodynamic journal bearing with the following	10
	specification for machine tool application:	
	journal diameter = 75 mm	
	radial load = 10 kN	
	journal speed = 1440 rpm	
	minimum oil film thickness = 22.5 microns	
	inlet temperature = 40°C	
	bearing material = babbitt	
	Determine the length of the bearing and select a suitable oil for this	
	application.	
b.	A single-row deep groove ball bearing is subjected to a pure radial force of	10
	3 kN from a shaft that rotates at 600 rpm. The expected life L <sub>10h</sub> of the	
	bearing is 30000 h. The minimum acceptable diameter of the shaft is 40	
	mm. Select a suitable ball bearing for this application.

## BTECH (SEM VI) THEORY EXAMINATION 2023-24 MACHINE DESIGN

TIME: 3 HRS M.MARKS: 100

Attempt any one part of the following:	$1 \times 10 = 1$	10
A four-stroke diesel engine has the following specifications:	10	
Brake power = 5 kW; Speed = 1200 r.p.m.; Indicated mean effective	e	
pressure = $0.35 \text{ N/mm } 2$ ;		
Mechanical efficiency = 80 %.		
Determine: 1. bore and length of the cylinder; 2. thickness of the cylinder	r	
head; and 3. size of studs for the cylinder head.	L	
An automotive plate clutch consists of two pairs of contacting surface with asbestos friction lining. The maximum engine torque is 250 N-m. The coefficient of friction is 0.35. The inner and outer diameters of friction lining are 175 and 250 mm respectively. The clamping force is provide by nine springs, each compressed by 5 mm to give a force of 800 N, when the clutch is new.  (i) What is the factor of safety with respect to slippage when the clutch is brand new?	e n d d n	
(ii) What is the factor of safety with respect to slippage after initial wea	r	(
has occurred?		. 1
(iii) How much wear of friction lining can take place before the clutch wi	1	1
slip?	18	) *
